

OPUS® AutoCuff® Magnum® PI Knotless Fixation Implant with TensionLock™ Mechanism

The next generation OPUS AutoCuff Implant

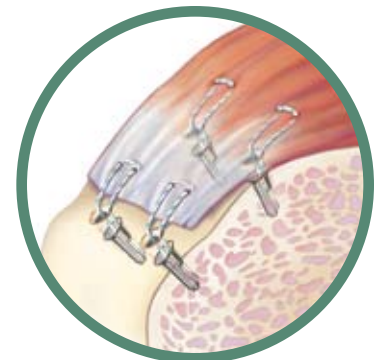

Magnum PI for rotator cuff repair. Our Technology. Your Vision.

- Radiolucent implant made with PEEK-OPTIMA® polymer provides ideal fixation that is easily revised
- Knotless design locks securely under the cortex, reducing the possibility of gap formation
- TensionLock allows for lateralization of the cuff to restore the anatomic footprint with fine .5mm adjustments
- Similar pull out strength to the Magnum implant, one of the strongest implants available¹

Used with the SmartStitch® Suture Passing System for a single row repair, the AutoCuff System transosseous tunnel equivalent provides the ideal repair in an efficient manner.

In double row configurations, the Magnum PI may be used in the medial row, lateral row, or both.
